                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a naphthalene dioxygenase (NDO) or NDO CC related complex (I) comprising several polypeptides which contain an CC alpha subunit that contains substituted amino acids at specific CC positions. The polypeptides and host cells are useful for preparing CC (-)-(15, 2R)-cis-paththalene dihydroidol, (- or +)-cis-biphenyl-3,4-CC dihydroxylndan, 1,2-dihydroxxy-1,2,3,4-tetrahydronaphthalene, which CC involves contacting them with naphthalene, biphenyl, phenanthrene, CC involves contacting them with naphthalene, biphenyl, phenanthrene, CC dihydroxylndan, 2-dihydronaphthalene, respectively. The polypeptides and CC the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydroxy-1,3-dihydroxy-3,4-dihydroxy-3,4-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,3-dihydroxy-1,3-dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which constant compound such as indene, 1,2-dihydrophenanthrene and CC benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzoltane, contacting them with phenanthrene, dibenzoltane, cc dibenzothiophene, 9,10-dihydroanthracene, dibenzoltane, phenanthrene and CC corresponding dihydro dihydroanthracene, or 9,10-dihydrophenanthrene and CC corresponding dihydro dihydroanthracene, or 9,10-dihydrophenanthrene and CC corresponding dihydro dihydroanthracene, or 9,10-dihydrophenanthrene and CC cells are useful for preparing chiral diols for use in the polymer. CC cells are useful for preparing chiral diols for use in the polymer of the present sequence represents constitution of the polymer invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Best

                                                                                                                                                                                                                                                  benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, dibenzofuran, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the
                                                                                                                                                                                                                                                                                                                                                                      involves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroy-1,2-dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an aromatic compound such as indene, 1,2-dihydronaphthalene,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(15,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        В
The present invention describes a naphthalene dioxygenase (NDO) or NDO related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (')-(1S,2R)-cis-naphthalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (1S,2R)-cis-phenanthrene-1,2-dihydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2,cdihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which
                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, resin pharmaceutical or rubber industry and for carrying out bioremediation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pseudomonas sp. strain NCIB 9816-4; naphthalene dioxygenase; NDO; inducible multi-component enzyme; alpha subunit; mutant; chiral d polymer; resin; pharmaceutical; rubber industry; bioremediation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an aromatic compound such as indene, 1,2-dihydronaphthalene, benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzoturan, dibenzoturan, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene corresponding dihydro dihydroxy compound. The polypeptides and the hos cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represe a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the exemplification of the present invention.
                                                                                                                                                                                                                                      Pseudomonas sp. strain NCIB 9816-4; naphthalene dioxygenase; NDC inducible multi-component enzyme; alpha subunit; mutant; chiral polymer; resin; pharmaceutical; rubber industry; bioremediation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which climvolves contacting them with naphthalene, biphenyl, phenanthrene, climvolves contacting them with naphthalene, biphenyl, phenanthrene, climvolves contacting them with phenanthrene or 1,2-dihydronaphthalene respectively. The polypeptides and climvolves contacting them with phenanthrene. The polypeptides and the involves contacting them with phenanthrene. The polypeptides and the clis are also used in bioremediation in which they oxidise an aromatic compound such as indene, 1,2-dihydronaphthalene, benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, cacenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, cacenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, corresponding dihydro dihydroay compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, cells are useful for preparing chiral diols for use in the polymer, anaphthalene dioxygenase (NDO) mutant alpha subunit, given in the camplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                  dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which convolves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and contacting them with naphthalene respectively. The polypeptides and convolves contacting them with phenanthrene. The polypeptides and the involves contacting them with phenanthrene. The polypeptides and the const cells are also used in bioremediation in which they oxidise an aromatic compound such as indene, 1,2-dihydronaphthalene, convolved the convolved
                                                                                                                                                                                                                                                                                                                                                                                                                             alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing contains appearance of the positions of the polypeptides and positions. The polypeptides and host cells are useful for preparing containing the positions. The polypeptides are useful for preparing the positions of the polypeptides of the polypeptides.

present

invention

describes

ಶ

naphthalene

dioxygenase

(NDO)

or

NDC

Pseudomonas sp.

Naphthalene dioxygenase mutant F352A protein sequence

SEQ ID

NO: 33

inducible multi-component enzyme; alpha subunit; mutant; chiral diol

strain NCIB 9816-4; naphthalene dioxygenase;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                involves contacting them with naphthalene, biphenyl, phenanthrene, clindene, and 1.2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1.2-dihydroxy-1.2-dihydroxy-1.2-dihydrophenanthrene or 3.4-dihydroxy-3.4-dihydrophenanthrene which involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bloremediation in which they oxidise an aromatic compound such as indene, 1.2-dihydronaphthalene, oxidise an hencocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1.4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzo(1.4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, corresponding dihydro dihydroanthracene, or 9.10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represents naphthalene dioxygenase (NDO) from the Pseudomonas sp. strain NCIB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches 448;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

```
alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-) (1s,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-3C dihydrodiol, (1s,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-3.4-3C dihydrodiol, (1s,2R)-cis-phenanthrene, biphenyl, phenanthrene, which compounds them with naphthalene, biphenyl, phenanthrene, cidhydroxy-1,2,3,4-tetrahydronaphthalene, which contacting them with naphthalene, biphenyl, phenanthrene, which contacting them with phenanthrene. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxphenanthrene or 3,4-dihydroxy-3,4-dihydroxphenanthrene which convolves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an aromatic compound such as indene, 1,2-dihydronaphthalene, and thracene, phenanthrene, dibenzo(1,4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzo(1,4)dioxan, caenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, acenaphthylene, preparing chiral diols for use in the polymer, cells are useful for preparing chiral diols for use in the polymer, cells are useful for preparing chiral diols for use in the polymer, an aphthalene dioxygenase (NDO) mutant alpha subunit, given in the caenaphthy and the presents are constituted in the present sequence represents and the polymer, and the present sequence represents and the polymer presents and the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
(-)-(15,2R)-cis-naphthalene dihydrodiol, (-or+)-cis-biphenyl-3,4-cis-dihydroxylindan, (15,2R)-cis-phenanthrene-1,2-dihydroxylindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, cindene, and 1,2-dihydroxpaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-1,2-cidhydroxy-
                                                                                                                                                                                                                                                                                                                                         The present invention describes a naphthalane dioxygenase (NDO) or I related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel naphthalene dioxygenase mutant having a specific substitution for preparing chiral diols for use in the pharmaceutical or rubber industry and for carrying out

The present sequence repr a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the exemplification of the present invention.

CC (-)-(15,2R)-(15-napththalene dihydrodiol, (-0 r+)-(15-biphenayl-3,4-CC dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydroxnaphthalene, which CC dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which CC involves contacting them with naphthalene, biphenyl, phenanthrene, CC indene, and 1,2-dihydroxnaphthalene respectively. The polypeptides and CC the host cells are also useful for preparing 1,2-dihydroxy 1,2-CC dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydroxy-1,2-CC dihydrophenanthrene which CC host cells are also used in bioremediation in which they oxidise an CC aromatic compound such as indene, 1,2-dihydronaphthalene, compound such as indene, biphenyl, fluorene, dibenzofuran, compound such as indene, biph
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a naphthalene dioxygenase (NDO) or a related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, resin pharmaceutical or rubber industry and for carrying out bioremediation

```

The present invention describes a naphthalene dioxygenase (NDO) or N related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted actions at specific positions. The polypeptides and host cells are useful for preparing (-)-(15,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, cis-1,2-dihydrodiol

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        aromatic compound such as indene, 1,2-dihydronaphthalene, benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              involves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an

cc involves contacting them with naphthalene, biphenyl, phenanthrene, contacting them with naphthalene, biphenyl, phenanthrene, cc indene, and 1,2-dihydronaphthalene respectively. The polypeptides and ct the host cells are also useful for preparing 1,2-dihydroxy-1,2-cc dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which convolves contacting them with phenanthrene. The polypeptides and the classific compound such as indene, 1,2-dihydrophenanthrene which they oxidise an cc aromatic compound such as indene, 1,2-dihydronaphthalene, cc benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, cc acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, cc dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cc cells are useful for preparing chiral diols for use in the polymer, cresin, pharmaceutical or rubber industry. The present sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the cc exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                  alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(15.2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (15.2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, resin pharmaceutical or rubber industry and for carrying out bioremediation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 2000-452174/39.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   В
                                             involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an aromatic compound such as indene, 1,2-dihydronaphthalene, benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzo(1,4)dioxan, dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represent a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(IS,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (IS,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydroxy-1,2-dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which host cells are which host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydrophenanthrene or 3,4-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry and for carrying out bioremediation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 13;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2000-452174/39.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        dihydrodiol, (15/R) cits-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, cis-1,2-dihydrodiol, cis-1,2-dihydrodiol, cis-1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which ci involves contacting them with naphthalene, bihenyl, phenanthrene, ci indene, and 1,2-dihydronaphthalene respectively. The polypeptides and ci the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydroxy-1,2-dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which ci involves contacting them with phenanthrene. The polypeptides and the lost cells are also used in bioremediation in which they oxidise an caromatic compound such as indene, 1,2-dihydronaphthalene, oxidise an caromatic compound such as indene, 1,2-dihydronaphthalene, dibenzo(1,4)dioxan, compound caromatic compound such as indene, 1,2-dihydronaphthalene, caromaphthylene, naphthalene, biphenyl, fluorene, dibenzo(1,4)dioxan, caromaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, compound dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, cells are useful for preparing chiral diols for use in the polymer, pharmaceutical or rubber industry. The present sequence represents can phthalene dioxygenase (NDO) mutant alpha subunit, given in the cycle exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                         CC related complex (I) comprising several polypeptides which contain an CC alpha subunit that contains substituted amino acids at specific cpositions. The polypeptides and host cells are useful for preparing CC (-)-(15,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3.4-CC dihydroxyindan, 1,2-dihydroxyl-1,2-3,4-tetrahydronaphthalene, which cis-leves contacting them with naphthalene, biphenyl, phenanthrene, which college, and 1,2-dihydronaphthalene respectively. The polypeptides and college, and 1,2-dihydronaphthalene respectively. The polypeptides and college, and 1,2-dihydronaphthalene respectively. The polypeptides and college, and 1,2-dihydronaphthalene, and 1,2-dihydrophenanthrene which college contacting them with phenanthrene. The polypeptides and the college contacting them with phenanthrene. The polypeptides and the college contacting them with phenanthrene. The polypeptides and the constitution of the polypeptides and the corresponding dihydro dihydroanthracene, of 1,0-dihydronaphthalene, dibenzo(1,4)dioxan, constitution of the preparing chiral diols for use in the polymer, cresin, pharmaceutical or rubber industry. The present sequence represents anaphthalene dioxygenase (NDO) mutant alpha subunit, given in the company of the present invention.
                                                                     Matches
                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, resin pharmaceutical or rubber industry and for carrying out bioremediation
